

United States Patent D652,979 S covers the topic of the ornamental design of a compact fluorescent lampholder (CFL).

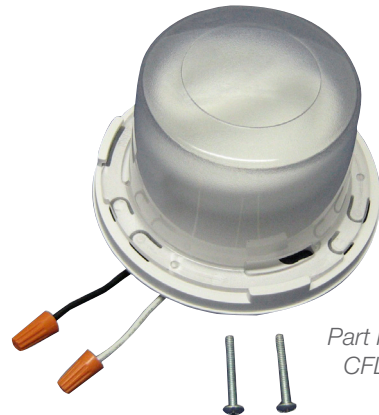

Allied Moulded Products, Inc. engineers designed a CFL luminaire with a stylish size and shape. It features locking tab retainers and anti-rotation buttons; the lens securely locks to the base with the spring-loaded tabs.

Allied Moulded's CFL offers energy savings of up to 75% compared to incandescent bulbs and has a 10,000-hour lamp life. The 13W lamp produces the same light as a 60W standard incandescent bulb. The lamp base mounts to most 3-1/2" and 4" ceiling boxes.

**Product Features:**

- The CFL is fully assembled with a GU24-13W lamp and polycarbonate lens. It is very versatile in function, working well in attics, basements, closets, garages and other locations.

Allied Moulded Products, Inc. offers two versions of the patented lampholder design: one that is keyless and operates with a switch (shown) and one with a pullchain. Allied Moulded also offers the replacement bulb. Please visit [www.alliedmoulded.com](http://www.alliedmoulded.com) for more information on any of Allied Moulded's products.
